my code was running ok on a linux system, when I moved to a Unix system (Solaris) the makefile gave me an error. Here is a snap of it:

```
makefile:
# mysh - makefile to make mysh
all:
    cc mysh.c -o mysh
```

```
in the shell:
mksh: Warning: newline is not last character in file makefile
Current working directory /u/alhammad/cs333/project3
'ake: Fatal error: Don't know how to make target `
```

guess what? the problem is there is a space between '#' and the following word!!! remove it and problem is solved.

```
so the new working makefile is:
#mysh - makefile to make mysh
all:
    cc mysh.c -o mysh
```
