

Low Virtual Memory

If you keep receiving the message "Low Virtual Memory", then you need to change your paging file size, which is your Virtual Memory. It's easy to do so, Go to "My Computer" icon on your desktop and do a mouse right click. Then "properties" ==> "Advanced" tap ==> Under "Performance" click on "Settings". A small window will show up, choose "Advanced" tap, the last option is "Virtual Memory". Click change and you're there. It's better to have it more than 1024 if you have enough space. In my system, min = 2048MB and max = 4096MB.
